Activating this button assigns the Zones Camera for use, making it visible across all screens within the designated zone.

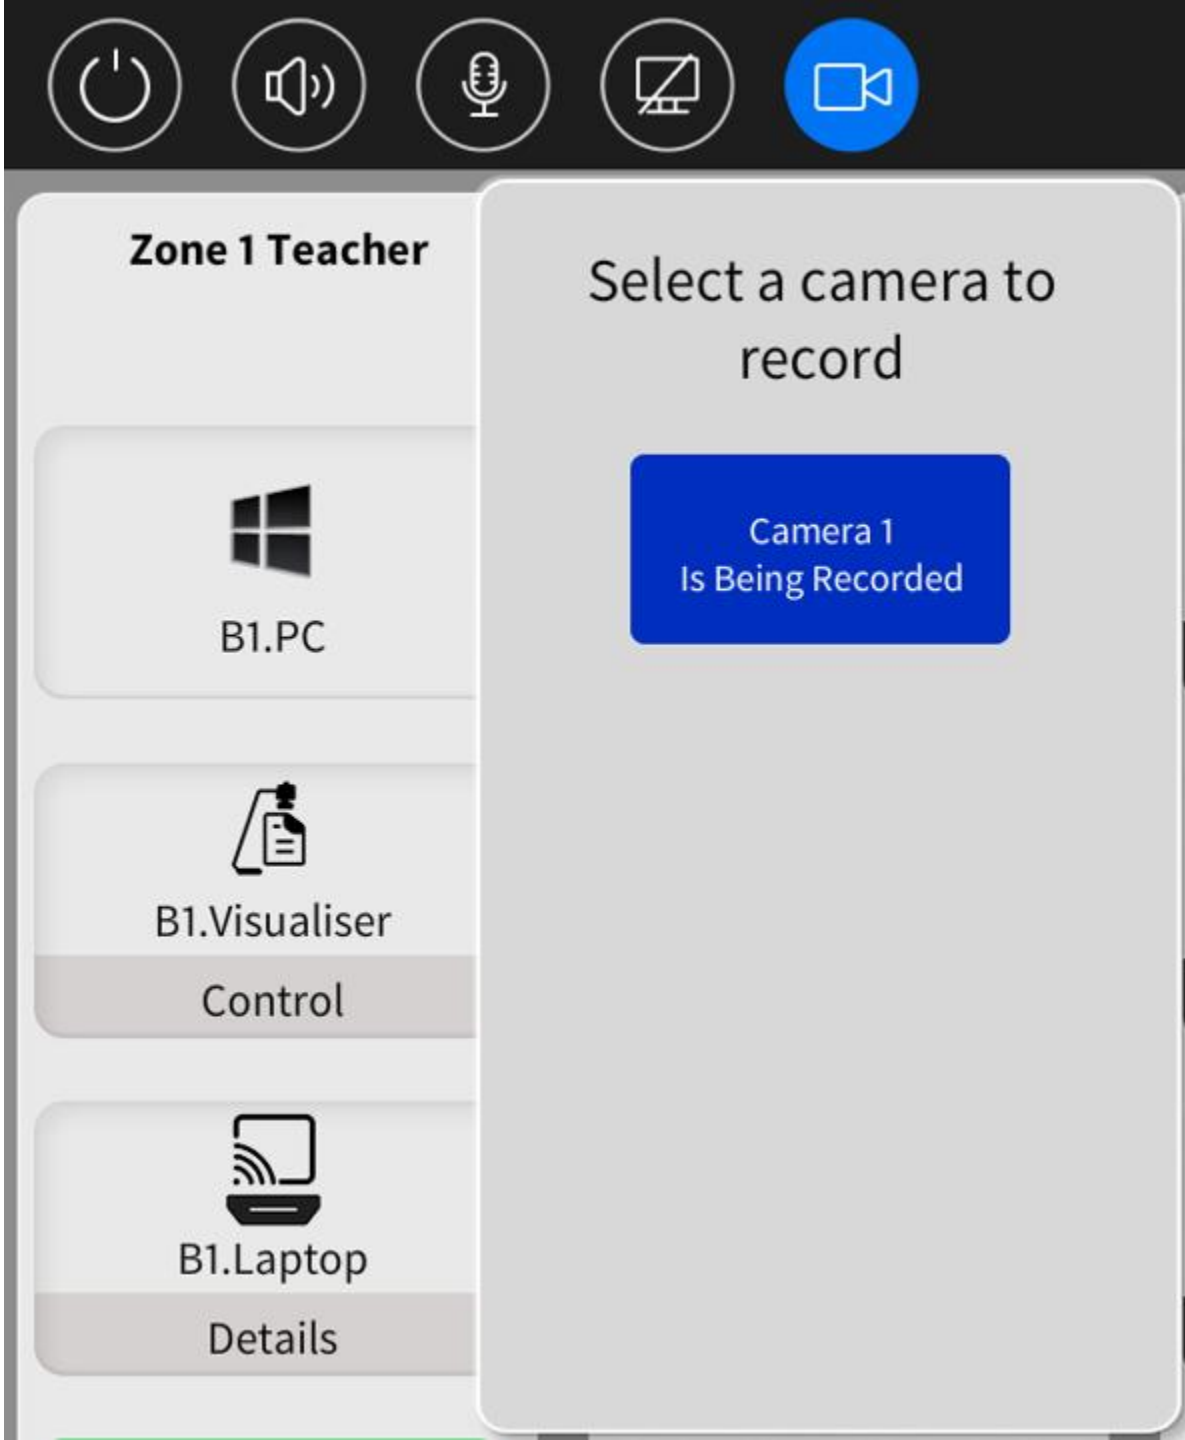

Pressing the control button located beneath the Camera button will display the Camera control panel.

The camera controls provided enable users to create presets for various viewing angles. These presets can be configured by manually adjusting the camera using the available tool.

Once the camera is positioned as desired, a preset can be configured by selecting one of the 'PRESET 6 - 17' buttons and holding it down for five seconds to save the camera position.

In a single-zone configuration, users have access to a dedicated camera for lecture capture. To initiate camera selection, press the designated button as illustrated; this will display the available camera for the zone. Once selected, **Camera 1** will begin capturing content exclusively within the active zone, ensuring focused and streamlined operation.

When devices are connected to the HDMI inputs at the workstations, their output is routed to the corresponding section of the control panel interface.

For instance, a device connected to (**Zone 1, Bench 2, Input 2**) will be displayed in the control panel area highlighted in **green**, allowing the academic to preview and moderate the content prior to distribution. To share this content across all screens within the zone, the academic can simply select the (green) highlighted section to initiate broadcast.

If users encounter uncertainty or require a simplified interface, selecting **Default** from the top section and **the desired source** will restore the system to its standard configuration, ensuring straightforward and intuitive operation. This option provides a reliable fallback for ease of use.

## Multiple Zones – Operating The Default Controls

When multiple zones are configured, the primary distinction in control operation lies in the need to focus on specific parameters associated with each zone. Users should pay close attention to zone-specific settings and routing options to ensure accurate configuration and seamless performance across all areas.

Configure  
Zones

Bench 1

---

Zone 1

**Tap To Begin**

Zone  
Power

Zone 2

Zone 3

Zone 4

To join zones together, press configure zones and the desired zone selection.

In this instance, Zones 1, 2 & 3 has been selected.

**In this example, Zone 4 cannot be selected as it is shown as currently in use and will need to be shutdown before it can be available.**

Once the zones have been configured, to start the system, please press 'Tap to Begin'

Bench 8

Zone 2

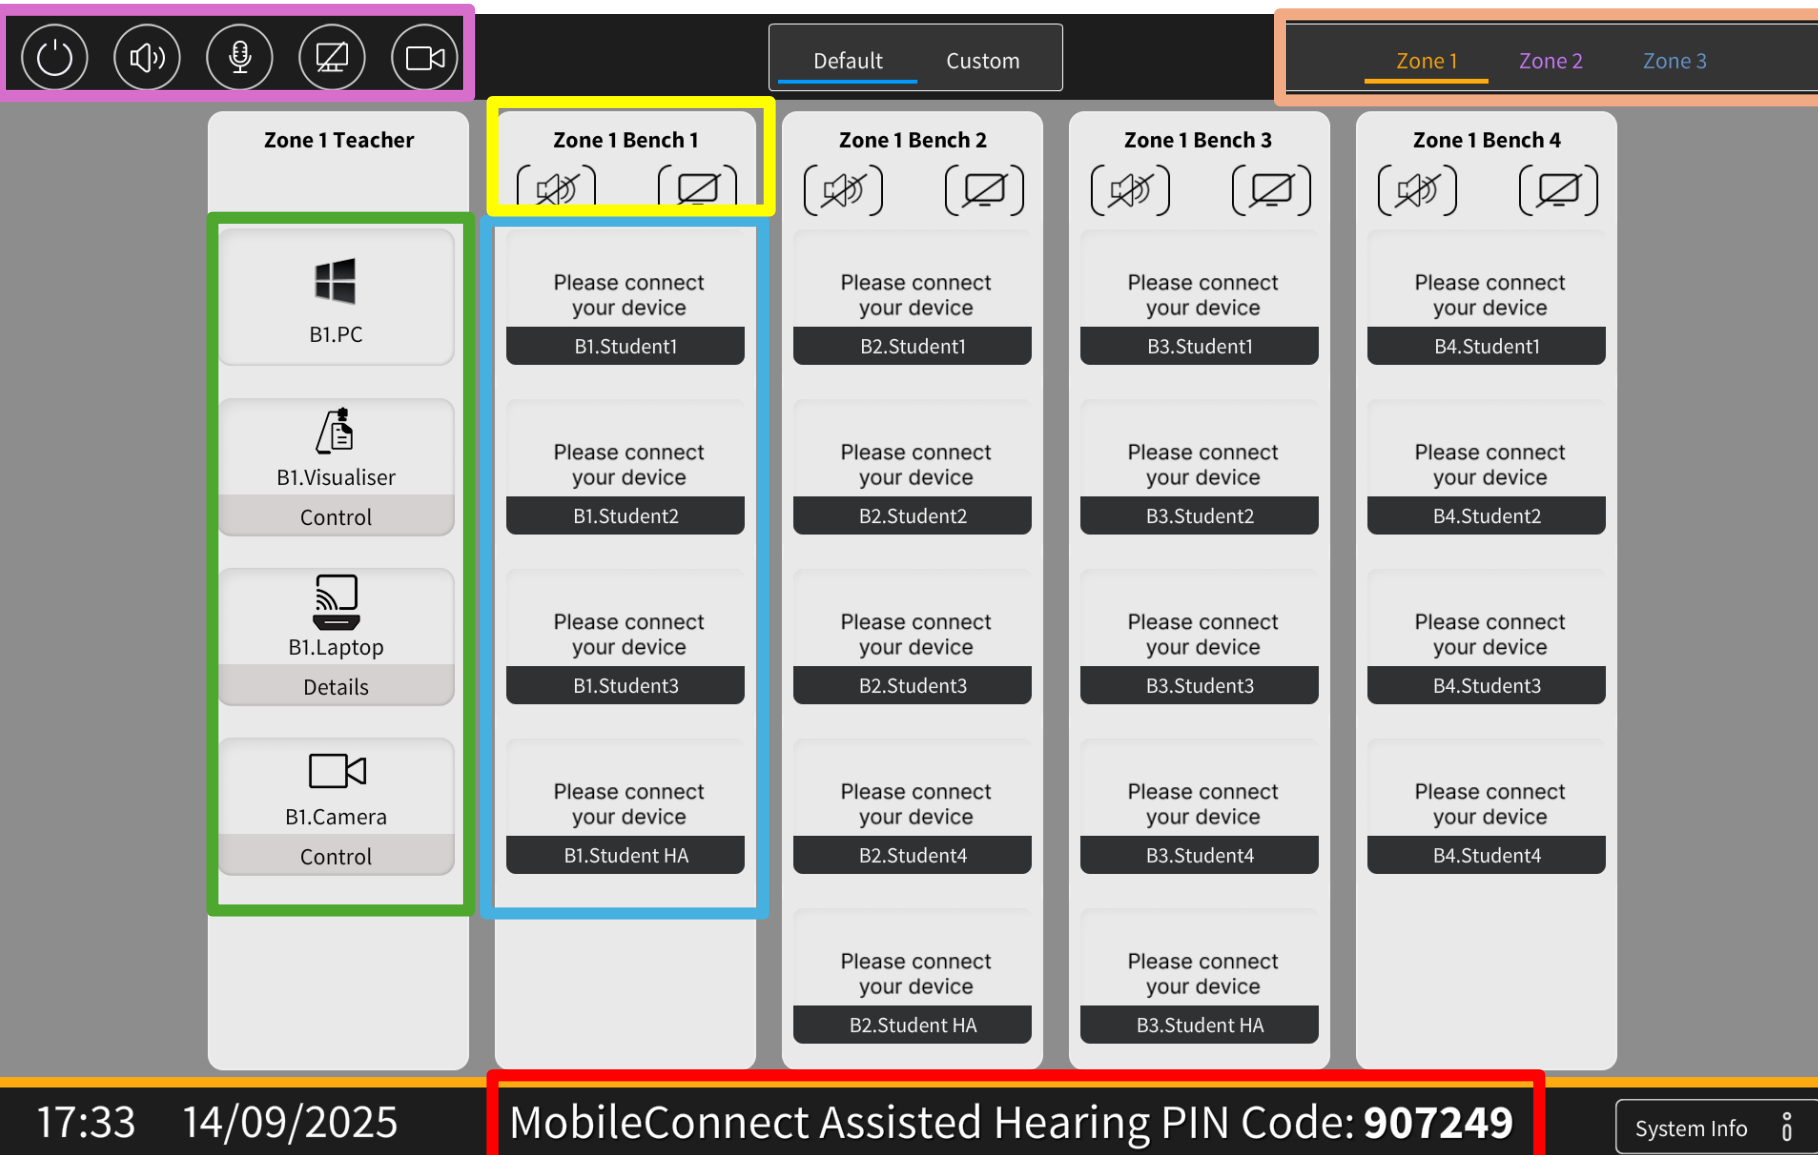

This zone is linked to another zone and is locked.  
Please use the touch panel in the controlling zone.

## MobileConnect Info

### To use the hearing assistance system:

Download the Sennheiser MobileConnect app,  
See poster for details of how to connect your mobile device.  
Scan the QR Code for the zone and enter the pin 907249  
(Your device will need to be connected to the university wifi)

When a zone is linked to corresponding zones such as **Zones 1, 2, and 3** any operations initiated from **Zone 1** will automatically display the configuration status across **Zones 2 and 3**. This ensures full visibility of active settings and helps prevent unintended interference with ongoing sessions in the linked zones. To reset the system and disengage linked zones, a system shutdown is required. This process ensures that all zone configurations are cleared, and the system returns to its default standalone mode upon restart.

 AV Source Selection

 To represent the connectivity in the Zone tables

17:33 14/09/2025 MobileConnect Assisted Hearing PIN Code: 907249 System Info

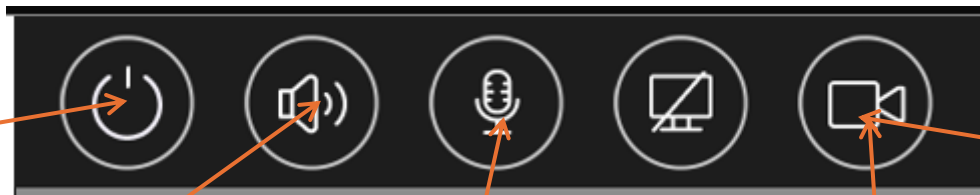

In this scenario, **Zone 1 functions as the master control zone**, serving as the primary workstation operated by the teacher. As **Zones 2 and 3** are also configured and linked, any control inputs or adjustments made from **Zone 1** will simultaneously affect the visual and audio output across all three Zones. With the PC selected as the source, its content will be displayed on all screens and heard throughout **Zones 1, 2, and 3**, ensuring synchronised delivery across the entire environment.

In a linked zone configuration, to display content connected via a desk input across all associated Zones, begin by selecting the Zone in which the student is located, followed by the relevant input source. For example, if **Zones 1, 2, and 3** are linked and a student is presenting from **Zone 2, Bench 6, Input 2**, (as per the image) again, allowing the academic to preview and moderate the content prior to distribution. Selecting this input will seamlessly route the content to all screens within **Zones 1, 2, and 3**, ensuring synchronised viewing across the entire environment.

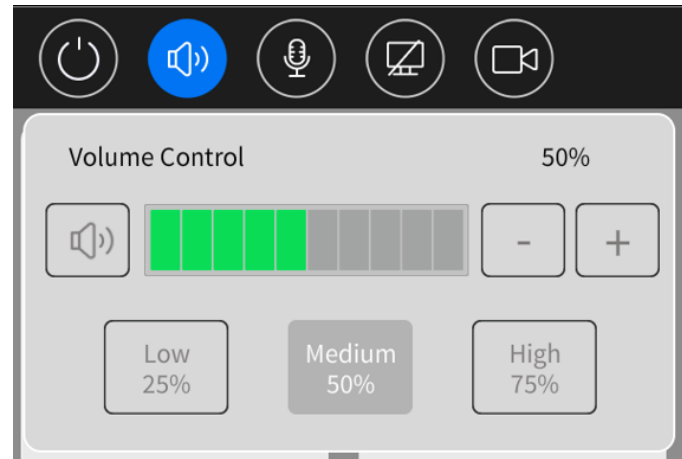

In a linked zone configuration, users have access to an expanded selection of cameras for lecture capture. To choose a camera, select the designated button as illustrated; this will display all available camera options. To initiate the camera, simply press the desired camera from the list. In this scenario, **Camera 1** has been selected and is actively capturing content. Please note that in a linked zone configuration, only one camera can be active for capture at any given time. This ensures a consistent and unified video feed across all connected zones, preventing conflicts or overlapping inputs during session recording or presentation.

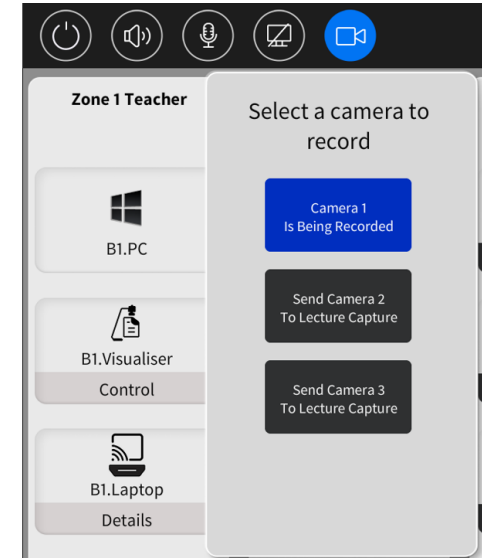

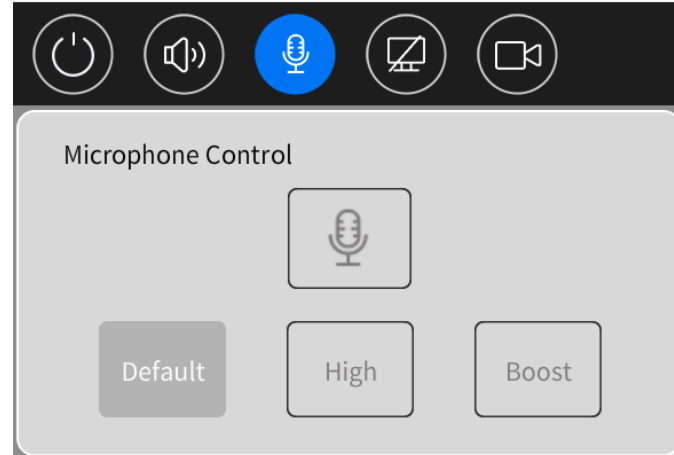

**System Off** – Press this button to shut down the system once usage is complete.

**Audio Controls** – Use this feature to regulate sound levels within the designated zones.

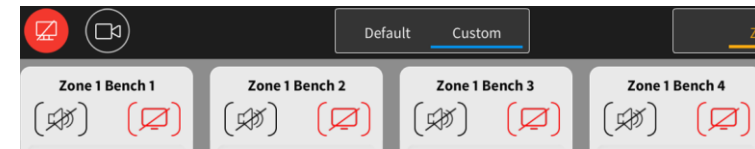

**Camera Options** – Use this feature to view and select available cameras for operation. Zones 1, 2 & 3.

**Microphone Mute** – Use this feature to mute the microphones when privacy is needed across all designated zones.

**Screen Blank** – Use this feature to blank the displays when privacy is needed.

If users encounter uncertainty or require a simplified interface, selecting **Default** from the top section **and the desired source** will restore the system to its standard configuration, ensuring straightforward and intuitive operation. This option provides a reliable fallback for ease of use.

## Zones 3 & 4 – Operating The Default Controls

The initial interface layout varies slightly to reflect the physical configuration of each zone. Zones 1 and 2 accommodate four workstations, while Zones 3 and 4 are designed with three. Despite these visual differences, the system's functionality remains consistent across all zones. The key distinction lies in the display format. Zones 3 and 4 utilise a single large screen in place of four individual screens. All other aspects of usability and control remain identical.

Zones 3 and 4 are equipped with a single large-format display, and as such, this section of the interface is tailored to reflect that configuration. The display is positioned at the end of **Bench 10**, providing centralised visibility. If it becomes necessary to blank the screen, for example, during transitions or to prevent distraction this can be achieved by pressing the designated button, which will blank the display accordingly.

## Zones 3 & 4 – Operating The Custom Controls

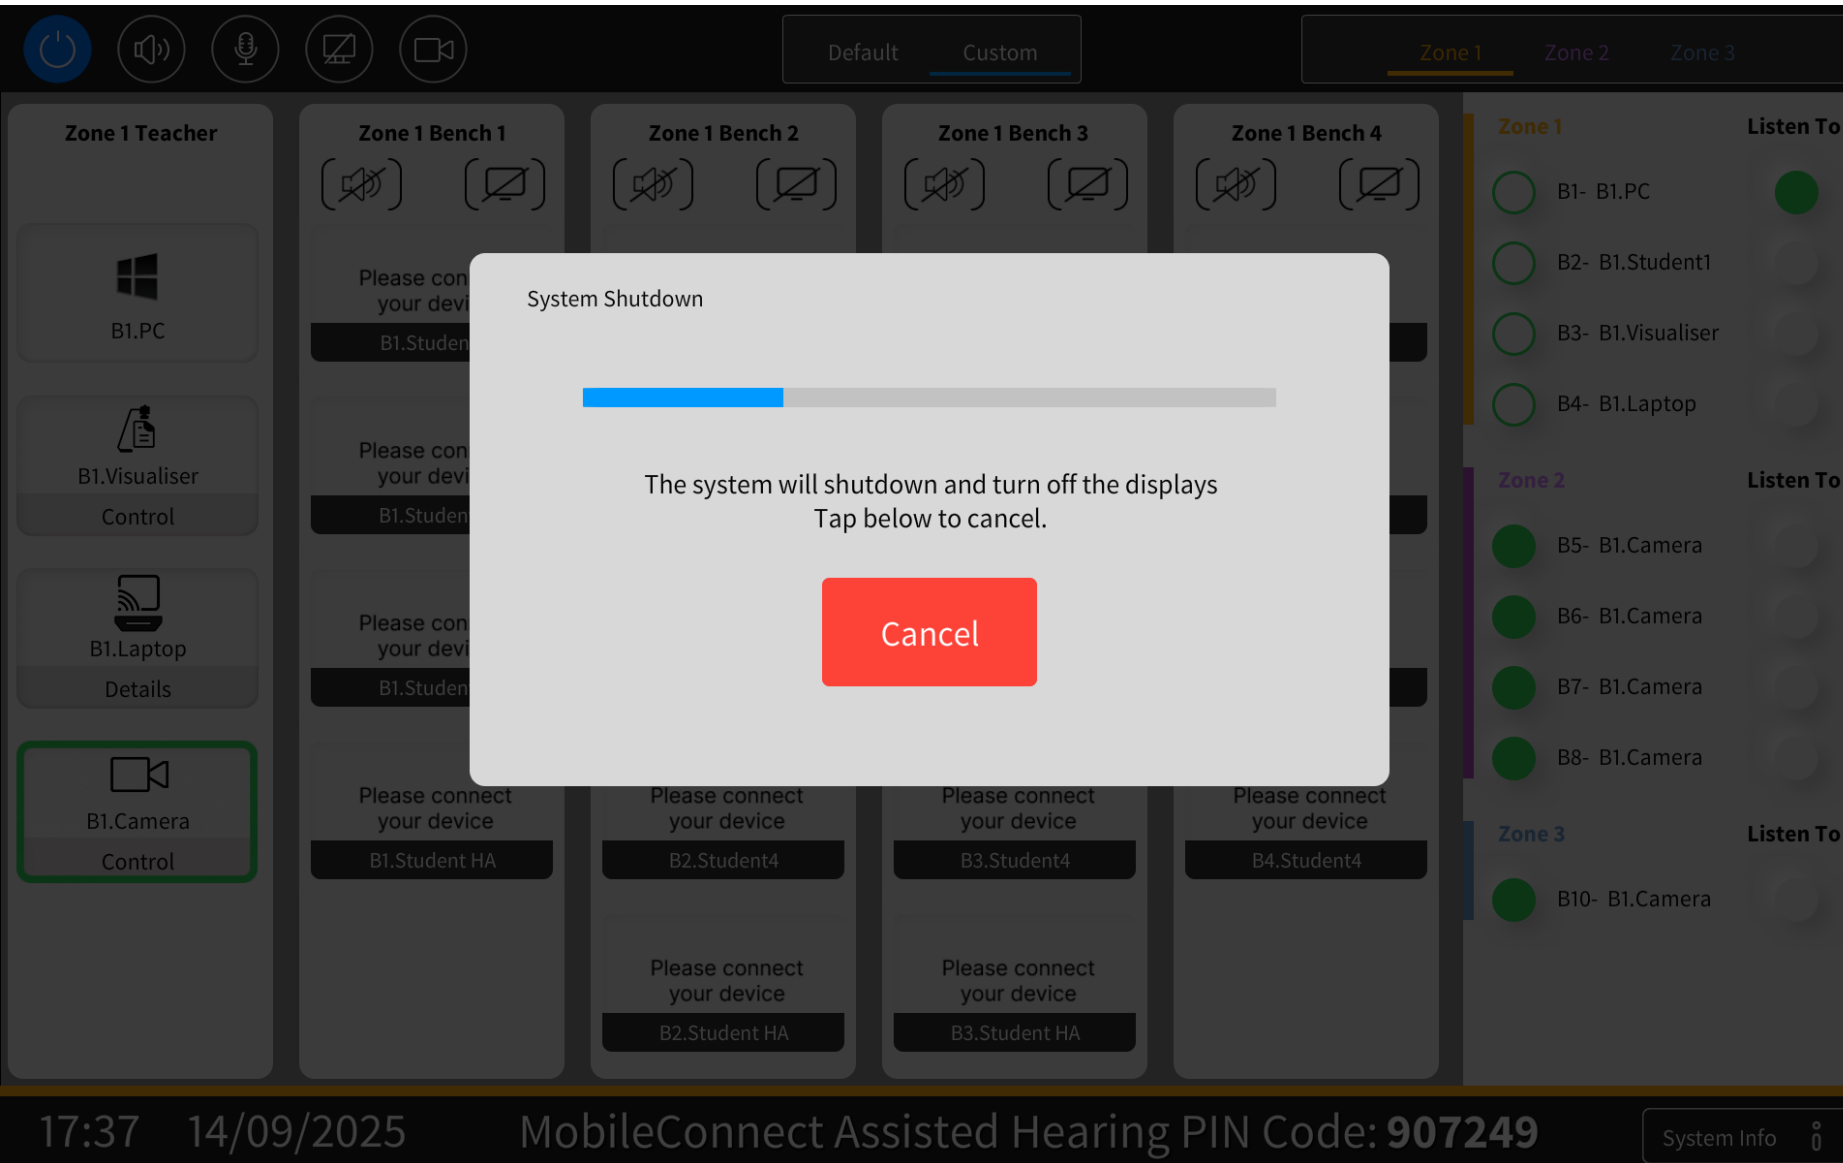

For enhanced flexibility in routing content and audio independently within a designated zone, select **Custom** from the top section as indicated. Pressing a source button first routes it to the Teachers Monitor for moderation. This feature enables tailored configuration to meet specific distribution requirements. In the case of **Zone 3**, where only a single large-format display is available, simultaneous presentation of multiple content sources is not supported. All routing will be directed to the single display only.

In a single-zone configuration, users have access to a dedicated camera for lecture capture. To initiate camera selection, press the designated button as illustrated; this will display the available camera for the zone. Once selected, **Camera 3** will begin capturing content exclusively within the active zone, ensuring focused and streamlined operation.

# The Shutdown Procedure

System Off – As previously noted, once users have completed their session, they should press the 'System Off' button. This will initiate the shutdown sequence, display the shutdown confirmation page, and no further action will be required.
